I've been making Youtube videos recently, but I can't afford a good enough camera, so I've been using my laptop webcam, which isn't exactly "good quality". I don't have a job to earn money and buy an incredibly HD camera, but I'd love to have the chance to win this giveaway for a good camera! Thanks for the opportunity!

Being able to capture HD videos (and also still pictures) at a respectable image resolution with a 5MP CMOS sensor, I like the lightness of the VCCC-007 (only 97g inclusive of batteries), which is ideal for me as a previous wrist injury has forbade me to hold a bulky camcorder/DSLR for long.

Being a simple, straightforward & lazy person, I prefer my gadgets to be user-friendly (without the need to read a thick operation manual). With the absence of excessive buttons, recording is easily performed with a simple touch or two.

Moreover, I like to share my videos instantly so having a retractable USB connector certainly expedites the process as there is no need for another cumbersome USB cable (I don't like too many wires around).

Lastly, I like to take candid shots of children & pets outdoors. I can carry the VCCC-007 around conveniently around in my pocket. And when the opportunity arises, I can also quickly pick it out of my pocket to capture those precious moments in HD glory!

great features in a slim compact package. high resolution video recording combined with 4x zoom makes a good camera to capture those moments with your family. Yet so compact you can carry it anywhere and with an 8GB capacity you will have longer videos with this baby. It would also be a nice HD camera for my radio control helicopter to record onboard videos while flying around. I wish they can have a waterproof case so i would be able to attach it with my speed boat to get the feel of running 60KpH on water... overall its a great looking product with at an affordable price!

MC99

something than come in handy to allow me to record down any moment show by my little 2 years old boy :)

Jinye Tang

I'm a noob video camcorder user and casual video-taker so the simple controls and pocket size fit me to a tee. The high-def and 5MP would be a treat since my arsenal of video recording devices is all of 3.2 MP.
